### **PubMed Improvements**

If you have searched PubMed lately, you may have noticed the following new features in the database:

- You can add your **“Favorite” citations** to your existing Collections or create new ones using My NCBI. The PubMed abstracts display has an option **“Save Items”** to provide users with an easy way to add items to My NCBI Collections when you click on the **“Favorite”** button in your account when you are signed into MyNCBI. You can add “Favorite” citations to an existing collection or create new ones by adding items to a new My NCBI collection.
- Another PubMed improvement is making it easier to format references to send to a citation manager program by using the **Citation Manager** option in the **Send to** menu. Once you display your results in PubMed, go to the **Send to** menu and select **Citation Manager**, then click on the **Create File button** to download a text file (with a nbib extension) in the tagged MEDLINE format.

Check the following links for detailed instructions on how to use these features.

### **Cell Reports – A New Open Access Journal**

Please check out the **new open-access** journal from Cell Press, called **Cell Reports**. Below is an overview from the publisher, Elsevier:

[Cell Reports](#) will place particular emphasis on shorter, single-point stories, called Reports. This journal is a high-profile, open-access place to publish intriguing, cutting-edge material that describes one or two key findings. These Reports are not meant for preliminary findings that are not well supported by the data, but they should represent a significant

advance in the field that will drive further research and perhaps even raise more questions than they answer.

*Cell Reports* includes a section for Resources, which describe significant technical advances and/or major informational data sets.

**Open access means that readers will have immediate and unrestricted access to all papers published in *Cell Reports*.** Authors will retain full copyright for their articles and can choose to publish their work in *Cell Reports* under Creative Commons licenses.

To access Cell Reports, follow the link:

<http://www.sciencedirect.com/science/journal/22111247/1/1>

Want to subscribe to the RSS Feeds for this journal? go to:

## Nature Reviews Drug Discovery Offers Poster and Video Animation

*Nature Reviews Drug Discovery* offers a complimentary poster and accompanying video animation on Cancer Immunotherapies. “The poster and video describe various immunotherapeutic strategies, including non-antigen-specific approaches such as nonspecific immune stimulation and immune checkpoint blockade, and antigen-specific approaches such as adoptive cell transfer and vaccination approaches.”

Access the poster and video at: [www.nature.com/nrd/posters/cancerimmuno](http://www.nature.com/nrd/posters/cancerimmuno)

## Featured Website: Centre for Reviews and Dissemination (CRD)

This British organization produces DARE (Database of Abstracts of Reviews of Effects) and provides content to the Cochrane Library. A search of this site (updated daily) provides systematic reviews, economic evaluations and health technology assessments on your topic of interest.

CRD is part of the National Institute for Health Research (NIHR) and is a department of the University of York. The core program is funded by the NIHR, England; the Department of

Health, Public Health Agency, Northern Ireland; and the National Institute for Social Care and Health Research, Welsh Assembly Government.

Access CRD at: <http://www.york.ac.uk/inst/crd/index.htm>
