In September 2011, Congress and President Obama restored the authority of the Department of Health and Human Services (HHS) to issue “waivers” from rules that limit the way states can spend federal aid under a program called Title IV-E. That authority had expired in 2006. HHS now has the authority to issue 10 child welfare waivers per year for the next 3 years.

Nationwide, states are expected to receive roughly \$7 billion in IV-E funds in 2012. Of that total, about \$2.5 billion goes to services related to adoption. These funds are not affected by waivers.

Most of the rest, about \$4.2 billion, is eligible for waiver. Without a waiver, this money can be spent only on foster care. In addition, the foster care funding is an open-ended entitlement. That is, for every eligible child, a state is reimbursed for anywhere from half to, in some years, 83% of the cost of holding that child in foster care, with poorer states receiving a higher reimbursement rate (U.S. Department of Health and Human Services, 2011). (The percentage received by each state is the same percentage it receives for its expenditures under the Medicaid program. That percentage can vary from year to year and even quarter to quarter. Rates for 2011 can be found [on the last page of this HHS document](#) [U.S. Department of Health and Human Services, 2010].)

In contrast, in 2009, the most recent year for which data are available, states were given only about \$527 million to spend on prevention, family preservation, and family reunification under another federal program, known as Title IV-B. And in fact, the states spent only about \$331 million of that money on services to keep families together. Much of the rest was diverted into child abuse investigations and other child protective services activities. Some funding even was funneled into foster care (Stoltzfus, 2011).

So for every federal dollar a state spends on prevention and family preservation under Title IV-B, it spends, on average, nearly 13 federal dollars on foster care and another 7 federal dollars on adoption through Title IV-E. (See the Method, Caution, and Caveats section below for a full discussion of this estimate.)

This skewed system creates a perverse incentive. Although safe, proven alternatives to foster care cost less in total dollars, it sometimes may cost a state or a county less to throw a child into foster care.

### **The Potential of Waivers**

Waivers come in a variety of shapes and sizes. Some are quite limited; a state may want to experiment with only a small part of its IV-E funds and target them to a narrow purpose. But big, bold waivers have the most

potential to improve the lives of vulnerable children. Under these waivers a state agrees to take its entire share of that \$4.2 billion as a flat grant. The waivers usually last for five years. The state gets whatever it was expected to get under the entitlement, plus an adjustment for inflation. The state then gets the right to use the money not only for foster care but also for safe, proven alternatives to foster care, as well as for adoption.

There are several other advantages. Under the current entitlement program, if a state reduces needless foster care, it gets less federal IV-E money. Under a waiver, if a state reduces needless foster care, it gets to keep the savings, as long as those savings are plowed back into child welfare. In addition, waivers come with a “maintenance of effort” requirement. That means the state must agree not to use the federal money to replace existing state spending. In other words, budget-cutting state legislators, who normally might see child welfare as a tempting target, have to keep their hands off or see their state lose all of its Title IV-E foster care money as well.

Of course, some have worried about what would happen if a state rushes to tear apart more families after a waiver is in effect, since it would not get any more federal aid for those placements. The answer is that the state can opt out and return to the status quo, so it won't be penalized for the increase in placements.

That's not necessarily a good thing. It removes an incentive for putting the brakes on foster-care panics, sharp, sudden spikes in needless removals of children by child protective services agencies reacting to high-profile tragedies on the front page of a major newspaper, or demagogic grandstanding by politicians. The urge to harm children while protecting oneself by adopting a “take the child and run” approach would be tempered if top officials and political leaders knew that their state or local government would have to pick up the entire tab. But presumably HHS felt this would discourage too many states from applying for waivers.

But the waivers also come with another important requirement: states must arrange for independent evaluations—something which, of course, does not exist in any meaningful way under the status quo.

### **The Florida Experience**

All of these advantages have been seen in Florida, the one state bold enough to accept one of these large-scale waivers when they were briefly offered to the states in 2006. Michigan initially accepted such a waiver but changed its mind at the last minute. (Smaller-scale waivers were available for the previous decade.)

Thanks to the waiver, Florida can take about \$140 million a year in IV-E foster care funds and use it for better options as well. The results:

- *Less needless foster care.* From 2006, the last year before the waiver began, through 2010, the number of children in foster care on any given day was reduced by 35%. The number of children taken from their parents over the course of a year also was cut by 35%.
- *No slash-and-burn budget cuts.* When the Florida Legislature considered slashing the state child welfare budget, lawmakers were reminded that such cuts would mean the end of federal IV-E funding. The legislators backed off.
- *No foster-care panic.* When one reckless journalist for a major newspaper tried to exploit the horrifying death of a child and near death of her brother in an effort to reverse the state's family preservation reforms and return to a take-the-child-and-run approach (something she tried to do even though the children were taken from their birth parents only to be horribly abused allegedly by their *adoptive* parents), the child welfare agency refused to cave into the pressure.

And most important of all:

- ***Children are safer.*** The independent evaluations of Florida's waiver concluded that child safety improved. That's not surprising. With fewer needless removals, workers had more time to find children in real danger (Armstrong et al., 2010).

Indeed, the transformation in Florida was so remarkable that it was the subject of a major story in *The New York Times* (Eckholm, 2009). There's more about the Florida waiver in this post to the *NCCPR Child Welfare Blog*. (NCCPR Child Welfare Blog, 2010).

### Method, Cautions, and Caveats

The tables that follow are a guide to how much each state is likely to be able to spend flexibly if that state applies for and receives a waiver from Title IV-E foster care funding restrictions. That figure is compared to the amount the state actually spends now in federal dollars under the Title IV-B program.

Table 1 provides just that information; Tables 2 and 3 break down child welfare spending in more detail.

Table 1 uses the higher of two estimates concerning each state's Title IV-E foster care expenditures—an estimate for 2012 based on President Obama's budget proposal. The lower figure is the actual amount states will spend in 2011.

Why is the higher figure closer to the mark? Because IV-E is an entitlement program, and most of the spending increase, though not all, is built into the entitlement formula. So while the total is likely to be closer to the 2012 figure, it may fall somewhere between that figure and the 2011 figure. For most states, there is not a great deal of difference.

Although Title IV-B involves a lot less money, it's more complicated and requires a bit more explanation.

Title IV-B commonly is referred to as the federal funding stream for prevention and family preservation. But that's only partially true. Unfortunately, a lot of Title IV-B money legally can be diverted to other purposes, and it is.

Title IV-B has two major components: the Promoting Safe and Stable Families part (PSSF) and the Child Welfare Services part.

States are required to spend 9% of their PSSF funds on family support, family preservation, family reunification, and adoption promotion and support. States are required to spend no less than 20% of their PSSF funds on any one category.

This means that, as a practical matter, roughly 25% of all PSSF money is off-limits to family preservation, family reunification, and prevention. So while states received \$336 million in PSSF money in 2009, only about \$252 million was available for keeping families together.

The other program, called Child Welfare Services (CWS), has almost no strings attached. States spent nearly \$275 million in these funds in 2009, and all of it *could* have been used for keeping families together if states wanted to do it.

But states diverted a huge part of their limited CWS funds into child protective services—things like child abuse investigations and related work. Though this is shameful, it's entirely legal. Some funding even was diverted into foster care maintenance payments. (Some of the money diverted to foster care may have been for a morally legitimate reason as well. It may have been used to help grandparents and other relatives who provide kinship foster care. When such relatives can't meet what often are page after page of hypertechnical foster-parent licensing requirements, the case usually isn't eligible for reimbursement under Title IV-E.)

The diverted funds are listed in Table 2.

As a result, as noted above, while we estimate states could have spent \$527 million on safe, proven alternatives to foster care under Title IV-B in 2009, they actually spent only \$331 million.

Other caveats:

- The IV-E data in the tables are for 2011 and 2012, but for IV-B the most recent figures we could get are for 2009. However, funds under Title IV-B are not an entitlement, so the total doesn't usually change much from year to year.
- Even if a state gets a waiver, not all of the money listed in the IV-E columns in the charts could be used for alternatives to foster care. Although NCCPR believes far too many children are in foster care, there are some children for whom it is genuinely necessary, so states still will have to use some of this money for foster care.
- Titles IV-B and IV-E are not the only federal programs that can be used to fund child welfare. Temporary Assistance for Needy Families (TANF), Medicaid, and the Social Services Block Grant also can be used. But Medicaid funds largely services for children already in foster care, and using the other two funding streams means taking money from other programs helping impoverished families. (Indeed, the use of TANF as a child welfare slush fund is a scandal in itself, as is discussed in our overview of child welfare finance issues [National Coalition for Child Protection Reform, 2010].) For good discussion of these other funding streams and how they can be used, see this analysis from ChildTrends (DeVooght, Allen, & Geen, 2008).  
So the best source of federal funding for prevention and family preservation, by far, is the huge amount now spent on foster care.
- The impact of waivers may be different in the 13 states in which individual counties run child welfare systems. The interplay of federal and state financial incentives may change the calculus concerning whether a waiver would work for a given county. But waivers already have been implemented successfully in some counties in Ohio and California.
